

REAL ALL-ROUNDERS

The tasks of functional clothing are diverse and vary according to activity. Whether for strenuous labour or in leisure time: It is crucial that you are equipped with the right clothes. And above all they must be able to keep: warm, cool and dry. In addition, they should prevent unpleasant odours and be extremely elastic and easy to care. Our lightweight functional shirts are not only breathable, quick drying and anti-bacterial, they also provide maximum freedom of movement. Further details such as extremely flat seams, offer even more comfort.

MERINO

Merino AirSoft Cap

- Warms in cold weather
- Natural moisture management
- Soft merino wool for scratch-free wear
- Anti-odour
- Perforation for increased ventilation
- Pressure-free flat-look seams
- Perfect cap for under the Protos®

Item 107023

The Merino AirSoft Cap is an absolutely scratch-free thin headgear. Through the pressure-free flat-look seams it is ideally suitable as a cap under the Protos® Integral. The 100 % merino wool is odour-resistant. The perforations in the cap allow for maximum ventilation and therefore optimum climate at the head. Due to the natural moisture management, the Merino AirSoft Cap can absorb a lot of liquid without feeling wet.

Material

100 % merino wool

For Christian Rimpl-Modlinger trees are the greatest living thing ever. His aim is to protect and maintain them. Since 2008 he has been self-employed with his company "plan B Baumpflege, but tree care is not only a profession for him, but rather a calling and passion. This also explains his very special attitude toward his fosterlings.

Christian, you say, trees are unique living things, whose needs must be addressed individually and carefully. That sounds very loving.

Yes, it is meant that way. I love trees and I have great respect for them. And based on this understanding I define our way of working. Primarily, we want to ensure that trees are healthy and safe, that we support them in their vitality and that we deal with them in respect and awe. We also try to communicate this to our customers.

What role does the right work wear assume?

A very important one of course. It happens now and then that one time slips during cutting. Then the right protection is crucial. Or sometimes a branch breaks off in an uncontrolled manner. In that case a functioning head protection is primordial. With Pfanner protective clothing we always feel good. And have made positive experiences for many years.

You work out in the open all year round. That's not always comfortable.

That's right. But even here we rely on Pfanner. Besides work safety, which provides us with the protective clothing, it is also about comfort, functionality in various weather conditions and good visibility. Pfanner fulfils all these requirements – whether in summer or winter. Also, I simply enjoy my job, no matter what the weather is.

This passion for trees – where does it come from?

I already had it as a child. That's why we try to also inspire children for trees in the context of an annual event. As part of an adventurous climbing experience they can go all the way up the green giants. And the joy that I see in their eyes, is the best proof for me that I'm quite normal – as far as my tree love goes (laughs).

That's a nice last statement. Thanks for the talk.

Nevertheless, it is part of your work, to cut down trees from time to time. Doesn't it hurt?

No, it is not that extreme. It's similar to people who are sick – sometimes the situation requires appropriate measures. And if a tree is beyond remedy, then one must also accept that felling is the final step. Indeed, sometimes this also concerns the safety of people or buildings. Those are priorities of course. But of course we try everything to help the tree and to preserve it.

Speaking of safety: Is your job dangerous?

Of course, the risk of accidents is high when you climb in trees, up into the crowns and starting cutting it down. Indeed we rarely employ risers, but are actually up in the trees. But first and foremost, we have a highly qualified staff, we constantly receive training and of course we pay particularly attention to all safety-related criteria.
