One **agria**. Many possibilities!

PRODUCT HISTORY

Over 75 years of experience.

Agria-Werke GmbH is a medium-sized family business that has been manufacturing equipment for gardening, landscaping and the public sector for over 75 years. Since its foundation, the company has been located in Möckmühl, in the north of Baden-Württemberg, and is rooted and integrated in this region. In addition to regularly sponsoring local sports clubs, Agria is always involved in local projects with partners such as local schools, the Johannes-Diakonie in Mosbach or the local nature conservation association (NABU). In addition, the company is involved in training young people as part of its dual training program.

For more than eight years now, **Agria** has been making intensive use of the possibilities offered by electrical engineering in the development of new equipment, using electric motors and electronic controls instead of mechanical or hydrostatic drives. The resulting significant increase in efficiency has made it possible to significantly reduce the necessary fuel consumption of the equipment. In addition, Agria's first battery-powered tool carrier made its production debut in 2023.

WHAT TO EXPECT Everything at a glance.

WHAT MAKES US SPECIAL

Our principles.

Our goal is to support you everyday in making our world a little bit more beautiful.
We always orient ourselves by the following principles.

BEST QUALITY

The agria quality management system certified by ISO 9001 ensures compliance with the highest quality standards. This is the basis for continuous improvements and ends in a comprehensive final inspection, so that no machine leaves the factory without a final check.

Long-time users, but also a growing number of collectors and fan clubs, appreciate this quality.

EASY OF USE

Developing agria-devices, the operator's safety is the most important thing. For us, the best possible ease of use, optimum functionality and efficient work are the standards by which we like to be measured.

With remote-controlled mowers and patented features such as the easy-control system, even the heaviest jobs can be carried out absolutely safely, quickly and thoroughly.

INNOVATIONS

Our professional products are constantly improved to meet the highest safety standards. In cooperation with the university of Mosbach, Germany our competent R&D team continuously strengthen their skills, especially in mechanics and electronics with specially trained engineers.

Specially manufactured development platforms and a fully equipped prototype construction ensure that we are always one step ahead in the market. The highly innovative remote-controlled mowers are the best examples of this.

CUSTOMER-FRIENDLY SERVICE

Service is one of our top priorities. A dense network of frequently trained dealers and a fast customer service support your agria its whole life.

This also includes the mobile service technician on-site.

Even in the developing of machines we consider fast and easy maintenance and service. To keep your agria running we have a huge stock of spare parts that can be shipped the same day.

Additional services on our website like downloads of user manuals, service videos and the search for spare parts complete the full-service package.

One **agria**. Many possibilities!

AGRIA FOR OUR ENVIRONMENT

Success and sustainability.

HANDLING RESOURCES

Agria uses natural resources sparingly and carefully. The company has drawn up a CO² balance sheet and plans further reduction of CO² consumption. For example, in 2021 the lighting of all assembly halls and warehouses was changed to economical LED lamps and about 20 % of the company fleet already consists of cars with pure or hybrid electric drive. Agria-Industriepark GmbH also operates several large photovoltaic systems on the company premises for sustainable power generation and operates its own charging stations for cars.

ENVIRONMENTALLY CONSCIOUS SURFACE MAINTENANCE

The **Agria product range** offers a wide selection of implements for environmentally conscious land maintenance - for example, cutter bars for wild meadow management, rotary tillers for pesticide-free weed removal or remote-controlled caterpillars for the annual cutting of tall grass and scrub only once or twice a year.

DURABILITY & REPAIRABILITY

As children of the post-war era, **Agria-machines** have always been designed for great longevity and repairability. The exceptional robustness and decades of service of the machines are the core of the Agria brand. Maintenance and repair of the machines are already intensively taken into account during the design phase. Wherever technically feasible, for example, components are joined together not by adhesives but by screws, so that individual parts can be easily replaced. Lubricants and oils are used as rarely as possible, and biodegradable substances are also frequently used.

SAFETY AT WORK

When developing our machines, **Agria** has always paid attention to safety and ergonomics. All machines have emergency stop and comprehensive safety concepts. Vibration-reducing components are installed in the hand-operated devices, remote-controlled machines allow emission-free and safe work from a distance. At the same time, remote control technology encourages people to continue working into senior age and promotes inclusion.

REMOTE CONTROLLED
ALL-ELECTRIC-TOOL-CARRIER

agria 9700e

Overview models

TECHNICAL SPECIFICATIONS

	agria 9700e
Article number	9700 111
Battery	Lithium ion battery (24.8 kWh / 480 Ah)
Voltage	48 V DC, protective extra-low voltage
Drive systems equipment	Stepless and brushless electric drive
Anchoring	Standard-three-point-linkage (CAT 1), with floating position
PTO shaft	100 – 1.000 rpm, rotation direction left/right
Power	Comparable with a 30 hp tractor
Direction	Change of driving direction enables the use of pushed and pulled equipment
Hydraulics	Top link and lower link, optional auxiliary hydraulics
Lifting height / Range	Lifting height: 130 – 480 mm*; Operating range: 350 – 550 mm*
Oil	Bio Hydraulic Oil (3 litres)
Brakes	Electromechanical fail-safe brake
Drive systems	Stepless and brushless electric drive
Speed ranges	4 speed ranges: 0 - 8,5 km/h
Slope capability	50° (119 %)
Remote control	Autec-Safety RC-System 2,4 GHz with 2,8" color display
Range	300 m (maximum) / 100 m (recommended)
Slope sensor for remote control	•
Dimensions L x W x H	180 x 120 x 84,7 – 92 cm
Ground pressure	0,251 kg/cm ²
Weight	approx. 780 kg without attachment
Price without VAT	79.900,00 €
Price Group (PG)	4
Options	
Charger 230 V, schuko plug art. no. 9779 111	2.590,00 €
Charger 400 V, CEE plug 16 A art. no. 9779 131	5.090,00 €
Charger 400 V, CEE plug 32 A art. no. 9779 151	9.990,00 €
Top link long version (500 - 800 mm) art. no. 9740 111	620,00 €
Extension snap hook; art. no. 9740 131	300,00 €
Additional hydraulic connector for equipment; art. no. 9739 111	540,00 €
Trailer hitch with adapter flange art. no. 9740 011	190,00 €
Crawler tracks with non-slip cleat-profile art. no. 9620 011	1.030,00 € (Additional charge)
Adapter for agria attachments (Cat. 1) art. no. 9755 111	1.390,00 €

	5956 633 Safety mulcher 105 safety-cutting technique, cutting width 105 cm, cutting height adjustment and brake function	165,0	3	8.690,00 €
	5956 643 Safety mulcher 125 safety-cutting technique, cutting width 125 cm, cutting height adjustment and brake function	185,0	3	9.090,00 €

GREEN SPACE MAINTENANCE

MOWING

Mowing helps stimulate denser grass growth. If the mowing material is lying too thick, the lawn surface below is damaged and bare spots occur. In the case of frequent mowing with a short cut it is not necessary to pick up the grass. Cutting of long grass can be done for producing quality animal feed.

Article-number	Article	Weight kg	PG	Price with-out VAT
Mowing with double knife side drive cutter bar				
	5547 761 Double knife cutter bar 125 working width 125 cm, with top and bottom knife, with left and right deflectors and a pair vertically adjustable skids	29,0	3	2.590,00 €
	5547 771 Double knife cutter bar 140 working width 140 cm, design like art. no. 5547 761	31,0	3	2.690,00 €

	5547 795 Double knife cutter bar 210 working width 210 cm, design like art. no. 5547 761	47,0	3	3.040,00 €

Required

	5546 712 Double knife mowing attachment in oil bath includes an aluminium protecting cover and balanced stroke between top and bottom blade	44,0	3	3.440,00 €
-------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------	------	---	------------

Options for double knife side drive cutter bar and portal attachment

	5547 941 Pair additional weights improves the guidance in slope	3,8	3	190,00 €
	5547 951 Pair cutter bar skids rigid, cutting height approx. 9 cm, not for art. no. 5547 761 and art. no. 5546 261	2,0	3	100,00 €

Mowing with portal mowing attachments

	5546 261 Portal mowing attachment 125 working width 125 cm, double knife cutter bar, with adjustable external shoes	78,0	3	5.740,00 €
	5546 271 Portal mowing attachment 140 working width 140 cm, double knife cutter bar, with adjustable external shoes	84,0	3	5.890,00 €
	5546 281 Portal mowing attachment 160 working width 160 cm, double knife cutter bar, with adjustable external shoes	87,0	3	6.090,00 €
	5546 291 Portal mowing attachment 205 working width 205 cm, double knife cutter bar, with adjustable external shoes	94,0	3	6.590,00 €

Required for all attachments listed on this page

	9755 111 Adapter for agria implement to attachments (cat. 1) for agria implements with 3400 flange on three-point linkage (cat. 1)	26,0	4	1.390,00 €
-------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------	------	---	------------

GREEN SPACE MAINTENANCE

BELT RAKE

After cutting grass the cut can be loosened up, turned over and swathed with an implemented belt rake. Additionally, leaves can be removed from large areas.

Article-number	Article	Weight kg	PG	Price without VAT
5529 051	Mounted belt rake with 10 pronged rakes, 2 V-belts, working width 160 cm	180,0	3	4.690,00 €

HAYRAKES

A Hayrakes is used to pick up the clippings via the pick-up and deposit them to the side via the conveyor belt. Ideal on slopes, adaptable to the terrain.

Article-number	Article	Weight kg	PG	Price without VAT
5929 041	Hayrakes Alpflow with active transverse transport of the mowed material by conveyor belt, working width 178 cm	144,0	3	11.690,00 €

Optional

5929 141	Attachment for sliding shield	5,0	3	390,00 €
5929 241	Foldable side parts	8,5	3	420,00 €

It is possible to attach other attachments of category CAT 1 up to 300 kg and without permanent hydraulic power reduction.

Application examples can be found on the next page.

Contact us, we will be happy to advise you!

GROUNDS CARE

SWEEPING

Remove quickly and carefully dirt and snow on large surfaces with the rotating brush rolls. The brush rolls can also be effectively used to remove leaves.

Article-number	Article	Weight kg	PG	Price without VAT
3494 011	Front mounted sweeper 120 without brushes 2-gear brushes, swivelling via the handlebar	65,0	3	5.110,00 €
Required				
2494 451	Brushes 120 cm rough for sweeping snow and dirt, roll diameter 45 cm, working width 120 cm	11,0	3	320,00 €
2494 461	Brushes 120 cm fine for sweeping dirt and dust, roll diameter 45 cm, working width 120 cm	11,0	3	410,00 €
Optional				
3494 911	Splash guard 120 for extending the brush cover to the front	2,0	3	210,00 €

SOIL CULTIVATION

Warranty on the breakage of original agria hoeing knives

ROTAVATING

When rotavating light-medium grounds a finished seed or plant bed can be prepared in a single pass. The slower the rotavator is driven and the quicker the rotavator shaft rotates, the soil is crumbled more finely. Furthermore organic material can be included with the rotavator, for example, cover crops.

Article-number	Article	Weight kg	PG	Price without VAT
3410 221	Hoeing and tilling attachment 80, rough working width 80 cm, consisting of 1 pair hoeing tools, turnbuckle and cover	31,2	3	1.760,00 €
3410 121	Hoeing and tilling attachment, 80, fine working width 80 cm, consisting of 1 pair hoeing tools, turnbuckle and cover	33,5	3	1.820,00 €
Required				
3401 021	Hoeing and tilling drive for rotary soil cultivation with drive lock for reverse travel, adjustable depth skid, without hoeing tools and cover	18,0	3	1.770,00 €

Required for all attachments listed on this page

9755 111	Adapter for agria implement to attachments (cat. 1) for agria implements with 3400 flange on three-point linkage (cat. 1)	26,0	4	1.390,00 €
----------	----------------------------------------------------------------------------------------------------------------------------------	------	---	------------

**REMOTE CONTROLLED
ALL-ELECTRIC-TOOL-CARRIER**

agria 9700e

Application options for CAT 1 attachments

Thanks to its three-point CAT1 hitch, the agria 9700e can be used flexibly in a wide range of applications. Attachments weighing up to 300 kg and without permanent hydraulic power reduction can be mounted.

GREEN CARE

The agria 9700e adapts to any implement. With the adjustable PTO speed from 100 to 1,000 rpm, the agria 9700e adapts perfectly to the requirements of the attachment. Whether mulcher, mower or cutter bar, any attachment in the recommended performance class can be fitted to the machine. Thanks to the option of changing the driving direction of travel, both front and rear-mounted implements can be used.

FOREST

In sensitive environments such as forestry, environmentally friendly work is particularly important. With a low machine weight of 780 kg and optimum weight distribution thanks to the crawler chassis, the agria 9700e works very gently on the ground. The low machine height and the manoeuvrability of the tool-carrier make it possible to work in places where large tractors cannot be used. The use of small quantities of bio-hydraulic oil ensures compliance with legal requirements.

AREA MAINTENANCE

Thanks to the all-electric drive of the agria 9700e, work in quiet zones such as care centres, schools, zoos or even in the early hours of the morning can be carried out almost silently.

In addition to classic municipal tasks such as winter maintenance, area maintenance and green space maintenance, the agria 9700e is also suitable for a wide variety of transport tasks. The machine demonstrates its manoeuvrability particularly well on narrow access roads and paths.

FINE CUTTING
RESULT

The specially
shaped mulching
blade distributes the
cuttings evenly and
leaves a fine cutting
result. This pays off
especially on respre-
sentative grounds
in parks, hotels or
castles.

SOIL CULTIVATION

Warranty on the breakage of original agria hoeing knives

STONE BURYING

The stone burier is a special construction in which the rotavator shaft rotates reversely to the rotating direction of the tractor wheels. The soil cut out by the rotavator blades is thrown against a sieve whereby stones and rough plant rests are separated from the fine soil and subsequently is covered by this. So you can get a seed bed free from stones and other annoying materials and finely crumbled.

Article-number	Article	Weight kg	PG	Price without VAT
 3412 016 Stone burier U70	working width 70 cm, working depth 14 cm, drum laterally adjustable	128,0	3	6.790,00 €

More types of set of tyres please see page 22.

* Depending on the model, a fan screen is required

WEAR INSERT

The wear insert for flail mulchers is made of high-strength, durable plastic. It protects the housing above from damage by thrown objects such as stones and woods. Compared to metallic inserts, the plastic absorbs loud hits of impacting objects and thus enables quieter working.

GREEN SPACE MAINTENANCE

MOWING

Mowing helps stimulate denser grass growth. If the mowing material is lying too thick, the lawn surface below is damaged and bare spots occur. In the case of frequent mowing with a short cut it is not necessary to pick up the grass. Cutting of long grass can be done for producing quality animal feed.

Article-number	Article	Weight kg	PG	Price without VAT
Mowing with double knife side drive cutter bar

MAINTENANCE OF PATHS ON WATER-BOUND SURFACES

This implement is especially designed to remove uncontrolled growth from water-bound surfaces, as for example paths in parks, hiking trails and lanes in cemeteries as well as sports and playing grounds and dirt tracks. The rotating operation tools loosen up the compressed surface, remove undesired crops and improve the water permeability of the surface.

Article-number	Article	Weight kg	PG	Price without VAT

More types of set of tyres please see page 25

SUITABLE WEEDING BRUSHES

For frequent weed removal on paved surfaces the soft flat-wire brushes are particularly suitable. Steel brushes with further apart bundled brushes or mixed brushes are more aggressive . Therefore they are recommended for the initial removal of ingrowing weeds.

Protection guard; art. no. 5512 971 necessary for all attachments except for cutter bar with oscillating and planetary mowing drive	200,00 €

CUTTER BARS FOR ALL REQUIREMENTS

For professional landscaping is the robust municipal cutter bar recommended.

The universal cutter bar is very easy to maintain and is the right choice for the semi-professional usage.

The double knife cutter bar is running especially smooth. The system enables high working speeds even in dense vegetation.

The finger cutter bar is characterized by a very clean cut profile and is mostly used in the production of feed.

Wide area coverage is achieved most economically with the portal mowing attachment.

ATTENTION

The basic models of this type are supplied without wheels. Please order the wheels separately.

GREEN SPACE MAINTENANCE

MOWING

Mowing helps stimulate denser grass growth. If the mowing material is lying too thick, the lawn surface below is damaged and bare spots occur. In the case of frequent mowing with a short cut it is not necessary to pick up the grass. Cutting of long grass can be done for producing quality animal feed.

agria
hoeing knives

ROTAVATING

When rotavating light-medium grounds a finished seed or plant bed can be prepared in a single pass. The slower the rotavator is driven and the quicker the rotavator shaft rotates, the soil is crumbled more finely. Furthermore organic material can be included with the rotavator, for example, cover crops.

Article-number	Article	Weight kg	PG	Price without VAT
3409 222	Hoeing and tilling attachment 70, rough 70 cm working width, comprising 1 pair of hoeing tools, turnbuckle and cover	31,0	3	1.450,00 €

----------	---------------------------------------	------	---	----------

More types of set of tyres please see page 36

STONE BURYING

The stone burier is a special construction in which the rotavator shaft rotates reversely to the rotating direction of the tractor wheels. The soil cut out by the rotavator blades is thrown against a sieve whereby stones and rough plant rests are separated from the fine soil and subsequently is covered by this. So you can get a seed bed free from stones and other annoying materials and finely crumbled.

Article-number	Article	Weight kg	PG	Price without VAT
3412 016	Stone burier U 70 working width 70 cm, working depth 14 cm, drum laterally adjustable	128,0	3	6.790,00 €

More types of set of tyres please see page 36

RELIABLE FOR DECADES

Since the company was founded, rotary hoes have been a focal point at Agria. The hoeing tools, which run under a closed bonnet, produce consistently good results and are extremely robust and durable.

SOIL CULTIVATION

SOWING

While the power harrow shreds and levels the soil, the lawn sowing machine simultaneously sows the seed mixture - all in one working step.

Article-number	Article	Weight kg	PG	Price without VAT
Additional option for Front mounted power harrow				
3487 342	Mounted lawn sowing machine S 90 for mounting on to art. no. 3477 342, which is necessary for this purpose	29,0	3	3.860,00 €
				
3487 352	Mounted lawn sowing machine S 100 for mounting on to art. no. 3477 352, which is necessary for this purpose	30,0	3	3.960,00 €
				

CULTIVATING

When cultivating with a spring tine cultivator or a draw hook, a break up of the top vegetation layer is reached. This disroots the weed and the water and nutrients supply is improved. Spring tine cultivator and draw hook are often used in linear plantings as they do not penetrate deeply into soil and consequently do not endanger roots of the cultural plants.

Article-number	Article	Weight kg	PG	Price without VAT
3472 041	Spring tine cultivator Working width: 30 - 70 cm	16,0	3	790,00 €

Required

3440 221	Hitch	5,0	3	360,00 €
				

RIDGING

The ridger is mainly used in cultivation of vegetables and potatoes. With this working implement, the soil is ridged on the plants. The produced dikes dry quicker and warm up stronger than even soil. Danger of rot is therefore reduced and growth of the plants is stimulated.

Article-number	Article	Weight kg	PG	Price without VAT
3452 041	Ridger 2-row Working width up to 66 cm	35,0	3	660,00 €

Required

3440 221	Hitch	5,0	3	360,00 €
				

LEVELLING

The triple rakes are ideal for levelling of the soil with a minimum of vibrations. The tri-directional drive achieves a fast and clean result with low vibration.

Article-number	Article	Weight kg	PG	Price without VAT
5977 111	Levelling triple rake Working width 146 cm made of three simultaneously moving rakes	118,0	3	6.990,00 €
				

POTATOE RODDING

The potato lifting plough lifts the potatoes with the surrounding soil. The sieve bars separate the soil from the potatoes and place them next to the plough on the surface of the soil.

Article-number	Article	Weight kg	PG	Price without VAT
3443 041	Potatoe digging plough Working width: 38 cm	16,0	3	390,00 €

Required

3440 221	Hitch	5,0	3	360,00 €
				

PLOUGHING

The ground will be loosened and perfectly ventilated. Furthermore organic material can be included in the ground consistently when preparing the seed bed by ploughing.

Article-number	Article	Weight kg	PG	Price without VAT
3644 021	Full turn plough with attachment piece	35,0 37,0	3	890,00 €

Required

3440 221	Hitch	5,0	3	360,00 €
				

Recommended tyre equipment for Soil cultivation

MOWING

Mowing helps stimulate denser grass growth. If the mowing material is lying too thick, the lawn surface below is damaged and bare spots occur. In the case of frequent mowing with a short cut it is not necessary to pick up the grass. Cutting of long grass can be done for producing quality animal feed.

Article- number	Article	Weight kg	PG	Price with- out VAT

GROUND CARE

MAINTENANCE OF PATHS ON WATER-BOUND SURFACES

This implement is especially designed to remove uncontrolled growth from water-bound surfaces, as for example paths in parks, hiking trails and lanes in cemeteries as well as sports and playing grounds and dirt tracks. The rotating operation tools loosen up the compressed surface, remove undesired crops and improve the water permeability of the surface.

Article-number	Article	Weight kg	PG	Price without VAT
	5594 842 Surface conditioner W 90 working width 90 cm, working depth 0 – 4 cm, infinitely adjustable via drum, vertically rotating tool carriers with 10 cylindrical prongs	135,0	3	5.990,00 €
	5594 852 Surface conditioner W 100 working width 100 cm, working depth 0 – 4 cm, infinitely adjustable via drum, vertically rotating tool carriers with 14 cylindrical prongs	142,0	3	6.490,00 €

More types of set of tyres please see on next page.

SUITABLE WEEDING BRUSHES

For frequently weed removal on paved surfaces the soft flat-wire brushes are particularly suitable.

Steel brushes with further apart bundled brushes or mixed brushes, are more aggressive. Therefore they are recommended for the initial removal of ingrowing weeds.

SNOW BLOWING

Large surfaces can be removed from snow with a snow blower as well as higher snow depths. The rotary ejector channel allows a focussed distribution of removed snow.

SOIL CULTIVATION

Warranty on the breakage of original agria hoeing knives

ROTAVATING

When rotavating light-medium grounds a finished seed or plant bed can be prepared in a single pass. The slower the rotavator is driven and the quicker the rotavator shaft rotates, the soil is crumbled more finely. Furthermore organic material can be included with the rotavator, for example, cover crops.

Article-number	Article	Weight kg	PG	Price without VAT

TWO-WHEEL TRACTOR

agria 3600

Attachments and accessories

SOIL CULTIVATION

CULTIVATING

When cultivating with a spring tine cultivator or a draw hook, a break up of the top vegetation layer is reached. This disroots the weed and the water and nutrients supply is improved. Spring tine cultivator and draw hook are often used in linear plantings as they do not penetrate deeply into soil and consequently do not endanger roots of the cultural plants.

Article-number	Article	Weight kg	PG	Price with-out VAT
3472 041	Spring tine cultivator Working width: 30 - 70 cm	32,0	3	790,00 €

POTATOE RODDING

The potatoe lifting plough lifts the potatoes with the surrounding soil. The sieve bars separate the soil from the potatoes and place them next to the plough on the surface of the soil.

Article-number	Article	Weight kg	PG	Price with-out VAT
3443 041	Potatoe digging plough Working width: 38 cm	16,0	3	390,00 €

PLOUGHING

The ground will be loosened and perfectly ventilated. Furthermore organic material can be included in the ground consistently when preparing the seed bed by ploughing.

AGRIA MOSS BRUSHES

The agria moss brushes are made of a very stiff and abrasion-resistant polyamide. This results in a very high lifetime of the brushes and low moisture absorption. The 3 mm thick bristles free pavement surfaces from disturbing moss and weeds. In few minutes the brushes can be exchanged for others.

COMBINED SWEEPING				
Combined sweepers fulfil the same tasks as conventional sweepers. Their special feature is the possibility to mount additional attachments as for example the water spraying equipment or the implemented lateral sweeper.

CUTTER BARS FOR ALL REQUIREMENTS

In the professional landscape maintenance the robust municipal cutter bar is recommended.

The universal cutter bar is very easy to maintain and is the right choice for the semi-professional usage.

PURPOSEFUL
DESIGN

High grass often causes problems with grass flow and results blockages.

To prevent this, the specially adapted design of the agria 3600 BM transports the cuttings past the machine and deposits them evenly.

- Standard equipment
- not available

GREEN SPACE MAINTENANCE

MULCHING

Mulching means cutting, shredding, spreading and laying down of plants in landscape maintenance

Article-number	Article	Weight kg	PG	Price without VAT

Required				
 3690 021	Pair driving wheels 4.00 - 10 AS	15,6	1	620,00 €

MOWING

Mowing helps stimulate denser grass growth. If the mowing material is lying too thick, the lawn surface below is damaged and bare spots occur. In the case of frequent mowing with a short cut it is not necessary to pick up the grass. Cutting of long grass can be done for producing quality animal feed.

Briggs & Stratton instart*

Electric start at the touch of a button
10 minutes Quickcharge = 10 starts
60 minutes Fullcharge = 50 starts
Lithium-Ion battery and charger are included in delivery scope
*only for agria 8000 premium

Briggs & Stratton Instart: practical electric start at the touch of a button

Stepless Vario drive: always the optimal driving speed

APPLICATION AREAS FOR DISC MOWERS

The field of application of this disc mower is between brushcutter and cutter bar mower. Where the cutter bar mower is too wide or too heavy, this small mower can be used.

Thanks to its stepless variator drive, using the agria 8000 premium is very comfortable.

MOSS BRUSHES

The agria moss brushes are made of a very stiff and abrasion-resistant polyamide. This results in a very high lifetime of the brushes and low moisture absorption. The 3 mm thick bristles free pavement surfaces from disturbing moss and weeds. In few minutes the brushes can be exchanged for others.

FINE BRUSHES

The fine brushes are ideal for sweeping dirt and dust. Twelve rows of bristles pick up also fine materials and leave a clean working result. The spiral arrangement of the bristles ensures a smooth running and a high transport effect in one direction.

ROUGH BRUSHES

The rough brushes are ideal for sweeping dirt and snow. Compared to the fine brush, the rough brush has less, but stronger rows of bristles, what results in a higher centrifugal effect. That's why surfaces can be freed even from denser dirt and snow covers.

SNOW REMOVAL

A snowplough can be used to remove depths of snow from paths and surfaces when a sweep is just not sufficient. The use of front and wheel weights makes snow removal considerably easier.

hoeing knives

ROTAVATING

When rotavating light-medium grounds a finished seed or plant bed can be prepared in a single pass. The slower the rotavator is driven and the quicker the rotavator shaft rotates, the soil is crumbled more finely. Furthermore organic material can be included with the rotavator, for example, cover crops.

SOIL CULTIVATION

HOEING

Power hoes are essentially used in order to loosen already cultivated soil. Nutrients and water can then permeate deeper into vegetation. This hoe can also help with mechanical weed control. In contrast to our rotavator equipment, forward and reverse drive is not generated by a separate drive shaft but by the chipper itself.

Article-number	Article	Weight kg	PG	Price without VAT
Recommended				
1410 011	Pair side shields for basic hoeing tools and extension hoeing tools art. no. 1408 011	1,7	1	150,00 €
1408 011	Pair extension hoeing tools for working width extension to 20 cm	1,6	1	260,00 €
0111 011	Pair rotor covers for 65 cm working width, incl. fixtures	2,4	1	100,00 €

STRONG TRACTOR FOR SOIL CULTIVATION

For ploughing a tractor should be equipped with the largest possible driving wheels and rear weights. With its 10-inch-wheels, wheel weights and front weight, the powerhoe 0100-R is as powerful as a two-wheel tractor.

SOIL CULTIVATION

CULTIVATING

When cultivating with a spring tine cultivator or a draw hook, a break up of the top vegetation layer is reached. This disroots the weed and the water and nutrients supply is improved. Spring tine cultivator and draw hook are often used in linear plantings as they do not penetrate deeply into soil and consequently do not endanger roots of the cultural plants.

Article-number	Article	Weight kg	PG	Price without VAT
3472 041	Spring tine cultivator Working width: 30 - 70 cm	32,0	3	790,00 €

RIDGING

The ridger is mainly used in cultivation of vegetables and potatoes. With this working implement, the soil is ridged on the plants. The produced dikes dry quicker and warm up stronger than even soil. Danger of rot is therefore reduced and growth of the plants is stimulated.

Article-number	Article	Weight kg	PG	Price without VAT
3452 041	Ridger 2-row Working width up to 66 cm	35,0	3	660,00 €

PLOUGHING

The ground will be loosened and perfectly ventilated. Furthermore organic material can be included in the ground consistently when preparing the seed bed by ploughing.

Article-number	Article	Weight kg	PG	Price without VAT
3644 021	Full turn plough with attachment piece	27,0	3	890,00 €

POTATOE RODDING

The potatoe lifting plough lifts the potatoes with the surrounding soil. The sieve bars separate the soil from the potatoes and place them next to the plough on the surface of the soil.

Article-number	Article	Weight kg	PG	Price without VAT
3443 041	Potatoe digging plough Working width: 38 cm	16,0		390,00 €

HOEING VS. TILLING

A power hoe is more suitable for steady cultivated areas. In contrast to a tiller, the hoeing tools do not run under a closed cover and results in a coarser crumbling.

In addition, the soil is only cultivated to a depth of approx. 10 cm, which prevents excessive mixing of the soil structure.

DEMONSTRATION AT YOUR SITE

**MAKE AN
APPOINTMENT.
NOW!**

We think you should be able to evaluate your new agria before you buy it.

Test the machine on your area and see the performance and quality for yourself. Arrange **your desired appointment** for a **personal demonstration**.

NOT ENOUGH?

We would be happy to provide you with further information material that goes into more detail and more intensively on individual topics, such as

- **all-electric-tool-carrier**
- **soil cultivation** or
- **success and sustainability**

Thank you for your interest.
